Mr. T. Nelson
Box 1546
Poughkeepsie, New York

Dear Mr. Nelson:

You recently requested technical information about the Princeton Applied Research Corporation's lock-in amplifiers, for recovery of low level signals in the presence of noise. P.A.R. has endeavored to include complete product information, including prices, on their data sheets, but specific application data can only be provided in a limited way because of the variety of applications and conditions possible.

American Dynamics Corporation's purpose is to help you fully understand and apply these instruments to your project. We can provide answers to all questions about the instruments, their uses and limitations under a particular set of conditions, often directly over the telephone. Also, we will be pleased to arrange for our experienced engineers to demonstrate this equipment in your laboratory under actual or simulated conditions and, if desired, leave it for a thorough test and evaluation period.

You are never placed under any obligation to purchase equipment, nor pay any consulting or service fees. Also, you will not be visited, except by an appointment set at your request, at a time convenient for you. Please do not hesitate to call us at 617-491-6800 if you have any questions. In any event please let us know that you have or have not received the requested literature by returning the enclosed postage paid card with your preferences indicated.

Sincerely,

AMERICAN DYNAMICS CORPORATION

Donald R. Curtis
